

TABLE OF CONTENTS

EXECUTIVE SUMMARY

PREFACE

H. Dosch

Chair of the GENNESYS Initiative
Director Max-Planck-Institut für Metallforschung, Stuttgart (DE)

FOREWORDS

A. Schavan

Federal Minister for Education and Research, Berlin (DE)

J. Potočník

European Commissioner for Research, Brussels (B)

P. Couchepin

Former President of the Swiss Federal Council
Head of the Federal Department of Home Affairs (DHA), Bern (CH)

J. Figel'

European Commissioner for Education, Training and Culture, Brussels (B)

P. Busquin

Member of European Parliament, Committee on Industry, External Trade, Research and Energy (ITRE)
Chairman of the Scientific Technology Options Assessment Panel (STOA)
Former European Commissioner for Research, Brussels (B)

J. Buzek

Member of European Parliament, Committee on Industry, External Trade, Research and Energy (ITRE),
Brussels (B)

F. Fedi

Chairman of the EU-COST Senior Officials Committee, Brussels (B)

M. Stratmann

Vice President of Max-Planck-Gesellschaft (DE)

P. Omling

Director General of the Swedish Research Council (SE)
Former President of EUROHORCS

**■ J. Wood**

Former Chief Executive of the Council for the Central Laboratory of Research Councils, Chilton (UK)
 Former Chairman of the European Strategy Forum on Research Infrastructures, Brussels (B)
 Professor at Imperial College, London (UK)
 Chairman of EC Research: ERAB, Brussels (B)

■ R. Iden

Senior Vice-President, BASF S.E. (DE)
 Co-chair of the European Technology Platform for Sustainable Chemistry (ETP SusChem), Ludwigshafen (DE)

J.C. Lehmann

Former President and Current Member of the “Académie des Technologies Française”, (NATF), Paris (FR)
 Former Vice-President of Research and Development, Saint-Gobain, Paris (FR)

■ C. Rizzuto

President of ESFRI (B)
 President Sincrotrone Trieste (I)

■ T. Kishi

President of the National Institute for Materials Science (NIMS), Tsukuba (JP)
 Former Vice President of the Japan Science Research Council, Tokyo (JP)

■ G. Margaritondo

Vice-President for Academic Affairs, Ecole Polytechnique Fédérale de Lausanne (EPFL), Lausanne (CH)
 President of the Council: European Integrating Initiative for Synchrotron Radiation and Free Electron Laser (IA-SFS), Brussels (B)

1**INTRODUCTION****2****2****GENERIC CHALLENGES FOR FUNDAMENTAL RESEARCH IN NANOMATERIALS SCIENCE****2.1.**

Generic challenges for nanomaterials synthesis

8**2.2.**

Nanostructures

11**2.3.**

Nanomaterials phenomena

20**2.4.**

Nanomaterials functions

23**2.5.**

Nanomaterials modelling

24**2.6.**

General conclusions on generic challenges in nanomaterials research – “GENNESYS Science Centres”

27

3 SPECIFIC CHALLENGES FOR NANOMATERIALS DESIGN

3.1.	Overview	30
3.2.	Materials specific challenges for the synthesis of nanomaterials	32
3.3.	Structural nanomaterials	38
3.3.1.	Metallic materials	
3.3.2.	Metal hydrides	
3.3.3.	Ceramic materials	
3.3.4.	Coatings	
3.3.5.	Composites	
3.3.6.	Nanomineralogy	
3.3.7.	Nanodiamond	
3.3.8.	Conclusions and recommendations	
3.4.	Functional nanomaterials	57
3.4.1.	Electronic and semiconducting nanomaterials	
3.4.2.	Photonic materials	
3.4.3.	Materials for nanomagnetism and spintronics	
3.4.4.	Superconductors	
3.4.5.	Carbon nanomaterials	
3.4.6.	Dielectric materials	
3.4.7.	Conclusions and recommendations	
3.5.	Nano – Life sciences	70
3.5.1.	From polymers to biological systems	
3.5.2.	Bio-nanomaterials	
3.5.3.	Biomimetic nanomaterials	
3.6.	Polymers – Soft matter: Nanoscience and nanotechnology	84
3.7.	Inorganic nanomaterials	91
3.7.1.	Inorganic nanoparticles and organic-inorganic nanocomposites	
3.7.2.	Molecular, inorganic materials and hydrides	
3.8.	Coating materials	98
3.9.	Directions for nanomaterials research	103

4 SPECIFIC CHALLENGES FOR NANOMATERIALS ENGINEERING

4.1.	Overview	108
4.2.	Mechanical engineering and design	109
4.3.	Corrosion and protection of nanomaterials	113
4.4.	Tribology: Friction and wear at the atomic scale	115
4.5.	Joining of nanomaterials	121
4.6.	Metallic glasses in nanotechnology	127
4.7.	Directions for nanomaterials engineering research	130

5	SPECIFIC CHALLENGES IN NANOMATERIALS TECHNOLOGIES	
5.1.	Overview	132
5.2.	Information and communication: Nanoelectronics and photonics	133
5.3.	Bio-nanosystems	139
5.3.1.	Overview: Bio-nanomaterials technology	
5.3.2.	Materials and technology in medical science	
5.3.3.	Materials and technology in dentistry	
5.3.4.	Pharmaceuticals	
5.3.5.	Healthcare, cosmetics, ointments	
5.3.6.	Agriculture	
5.3.7.	Food sciences and technologies	
5.3.8.	Natural nanosystems	
5.4.	Chemical and related industries	163
5.4.1.	Chemical industry	
5.4.2.	Oil and petrochemistry	
5.4.3.	Catalysts	
5.5.	Nuclear technology	180
5.5.1.	Nanomaterials for fission technology	
5.5.2.	Nanomaterials for fusion technology	
5.6.	Energy technology	186
5.6.1.	Overview: Nanomaterials for energy	
5.6.2.	Energy production	
5.6.3.	Energy conversion	
5.6.4.	Energy storage and transportation	
5.6.5.	Energy saving	
5.7.	Nanotechnology in the processing industry	206
5.7.1.	Metallurgy	
5.7.2.	Ceramics	
5.7.3.	Polymers and composites	
5.8.	Transport technology: Aircraft and automotive	212
5.9.	Environment	219
5.9.1.	Natural environment	
5.9.2.	Man-made environment	
5.9.3.	Nuclear waste	
5.9.4.	Nanoparticles in the atmosphere and climate change	
5.10.	Toxicology	239
5.11.	Ancient and historical systems	241
5.12.	Security and safety	246
5.13.	Directions for nanomaterials technologies	254

6	METROLOGY, STANDARDISATION, INSTRUMENTATION – NANOMATERIALS TECHNOLOGY – THE NEED FOR NANOMETROLOGY RESEARCH AND TECHNOLOGY	260
<hr/>		
7	IMPLICATIONS OF GENNESYS FOR INDUSTRY	
7.1.	Importance of nanotechnology	272
7.2.	Nanotechnology forecasts	273
7.3.	Need for industrial research on nanomaterials	274
7.4.	Industrial research at large-scale facilities	275
7.5.	Synchrotron radiation and neutron techniques	277
7.6.	GENNESYS-Industry partnership: “European Technology Centres”	281
7.7.	Conclusions	287
Annex I	Table-top synchrotron light sources	288
Annex II	Industrial applications of large-scale synchrotron radiation and neutron instruments for advanced microelectronics	290
<hr/>		
8	FUTURE IMPLICATIONS OF GENNESYS FOR EUROPEAN SYNCHROTRON RADIATION, LASER AND NEUTRON FACILITIES	
8.1.	Overview	292
8.2.	Neutron facilities	294
8.3.	Synchrotron radiation and laser facilities	299
8.4.	Conclusions	304
<hr/>		
9	IMPLICATIONS OF GENNESYS FOR EDUCATION	306
<hr/>		
10	SOCIETAL, ETHICAL, ENVIRONMENTAL AND HEALTH IMPLICATIONS OF NANOMATERIALS SCIENCE AND TECHNOLOGY	310

11	CONCLUSIONS – RECOMMENDATIONS – FUTURE STRATEGIES AND ACTION PLAN	
11.1.	Overall conclusions: Barriers and generic challenges	320
11.2.	Key challenges for fundamental research	322
11.3.	Key challenges for nanomaterials design	326
11.4.	Key challenges for nanomaterials engineering	341
11.5.	Key challenges for nanomaterials technologies	344
11.5.1.	Overview	
11.5.2.	Information and communication: Nanoelectronics and photonics	
11.5.3.	Bio-nanosystems	
11.5.4.	Chemical and related industries	
11.5.5.	Nuclear technology	
11.5.6.	Energy technology	
11.5.7.	Nanometallurgy	
11.5.8.	Transport technology	
11.5.9.	Environment	
11.5.10.	Toxicology	
11.5.11.	Ancient and historical systems	
11.5.12.	Security and safety	
11.6.	Key challenges for nanostandardisation and -metrology	390
11.7.	Key challenges for industry	394
11.8.	Key challenges for large-scale research facilities	398
11.9.	Key challenges for education	402
11.10.	Key challenges for nanomaterials science and society	403
11.11.	GENNESYS Science and Technology Centres	406
11.12.	GENNESYS organisation	414
11.13.	Overall conclusions	415
12	LIST OF AUTHORS, CONTRIBUTORS AND PARTICIPATING INSTITUTES	418
13	APPENDIX I: GENNESYS MEETINGS, CONFERENCES AND PRESENTATIONS	448
14	APPENDIX II: LIST OF ACRONYMS	452
15	KEY WORD INDEX	456
